GreenSun Energy: New Financing Received for Tucson Solar Startup

GreenSun Energy of Tucson, Arizona is pleased to announce the *closing of an outside angel investment*. GreenSun is a turn-key solar developer for commercial-scale solar solutions. The company emphasizes innovative financial solutions for companies and other organizations interested in using solar energy.

With GreenSun's Onsite Solar Utility™ program, clients with electric utility costs exceeding \$25,000 a year, can "go solar" without investing hundreds of thousands to purchase a system. Instead, GreenSun's customers agree to a long-term purchase of electricity from The Onsite Solar Utility™ installed at their location – paying utility-comparable rates – and paying only for actual electricity produced. GreenSun's customers benefit from electricity price stability through a long-term solar energy contract, with GreenSun providing maintenance of the system at no cost to the customer. Potential customers include big box retailers, grocery stores, distribution centers, established non-profits with large facilities (roof space), and other highly-creditworthy, large energy consumers.

For more information, potential clients can contact Mikel Chertudi at Info@GreenSunEnergy.com.

This press release does not constitute an offer to sell or a solicitation of an offer to buy securities.
